(54) Title: CLONED DNA POLYMERASES FROM THERMOTOGA NEAPOLITANA AND MUTANTS THEREOF

(57) Abstract

The invention relates to a substantially pure thermostable DNA polymerase from *Thermotoga neapolitana* (Taq) and mutants thereof. The Taq DNA polymerase has a molecular weight of about 100 kilodaltons and is more thermostable than Taq DNA polymerase. The mutant Taq DNA polymerase has at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3' → 5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5' → 3' exonuclease activity of said DNA polymerase; (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides. The present invention also relates to the cloning and expression of the wild type or mutant Taq DNA polymerase in *E. coli*, to DNA molecules containing the cloned gene, and to host cells which express said genes. The Taq DNA polymerase of the invention may be used in well-known DNA sequencing and amplification reactions.

What Is Claimed Is:

1. A substantially pure *Thermotoga neapolitana* (Tne) DNA polymerase having a molecular weight of about 100 kilodaltons, or fragments thereof.
2. The DNA polymerase of claim 1, which is isolated from *Thermotoga neapolitana*.
3. The DNA polymerase of claim 2, which is isolated from *Thermotoga neapolitana* DSM 5068.
4. An isolated DNA molecule comprising a gene encoding a Tne DNA polymerase having a molecular weight of about 100 kilodaltons.
5. An isolated DNA molecule of claim 4, wherein the gene is modified to reduce 3'-5' exo activity.
6. The isolated DNA molecule of claim 4, wherein the promoter of said gene is an inducible promoter.
7. The isolated DNA molecule of claim 6, wherein said inducible promoter is selected from the group consisting of a λ-P_L promoter, a lac promoter, a *rrp* promoter, and a *rc* promoter.
8. A recombinant host comprising a gene encoding Tne DNA polymerase having a molecular weight of 100 kilodaltons.
9. The recombinant host of claim 8, wherein said gene is obtained from *Thermotoga neapolitana*.

-41-

10. The recombinant host of claim 9, wherein said gene is obtained from *Thermotoga neapolitana* DSM 5068.

11. The recombinant host of claim 8, wherein said host is prokaryotic.

12. The recombinant host of claim 11, wherein said host is *E. coli*.

5 13. A method of producing a Tne DNA polymerase having a molecular weight of about 100 kilodaltons, said method comprising:

- (a) culturing a cellular host comprising a gene encoding said DNA polymerase;
(b) expressing said gene; and
(c) isolating said DNA polymerase from said host.

10

14. The method of claim 13, wherein said host is a eukaryotic host.

15. The method of claim 13, wherein said host is a prokaryotic host.

16. The method of claim 15, wherein said prokaryotic host is *E. coli*.

15
comprising:

17. A method of synthesizing a double-stranded DNA molecule comprising:
(a) hybridizing a primer to a first DNA molecule; and
(b) incubating said DNA molecule of step (a) in the presence of one or more deoxyribonucleoside triphosphates and Tne DNA polymerase having a molecular weight of about 100 kilodaltons, under conditions sufficient to synthesize a second DNA molecule complementary to all or a portion of said first DNA molecule.

20

18. The method of claim 17, wherein said DNA polymerase is isolated from *Thermotoga neapolitana*.

WO 96/10640

PCT/US95/12356

-42-

19. The method of claim 18, wherein said DNA polymerase is isolated from *Thermologa neapolitana*, DSM 5068.

20. The method of claim 17, wherein said DNA polymerase is isolated from a recombinant host expressing a gene encoding said DNA polymerase.

5

21. The method of claim 20, wherein said host is a eukaryotic host.

22. The method of claim 20, wherein said host is a prokaryotic host.

23. The method of claim 22, wherein said prokaryotic host is *E. coli*.

10

24. The method of claim 17, wherein said deoxyribonucleoside triphosphates are selected from the group consisting of dATP, dCTP, dGTP, dTTP, dITP, 7-deaza-dGTP, dUTP, ddATP, ddCTP, ddGTP, ddITP, ddTTP, [α S]dATP, [α S]dTTP, [α S]dGTP, and [α S]dCTP.

25. The method of claim 24, wherein one or more of said deoxyribonucleoside triphosphates are detectably labeled.

15

26. The method of claim 25, wherein said detectable label is selected from the group consisting of a radioactive isotope, a fluorescent label, a chemiluminescent label, a bioluminescent label, and an enzyme label.

20

27. A method of sequencing a DNA molecule, comprising:
(a) hybridizing a primer to a first DNA molecule;
(b) contacting said DNA molecule of step (a) with deoxyribonucleoside triphosphates, the DNA polymerase having a molecular weight of about 100 kilodaltons and a terminator nucleotide;

WO 96/10640

PCT/US95/12358

-43-

(c) incubating the mixture of step (b) under conditions sufficient to synthesize a random population of DNA molecules complementary to said first DNA molecule,

5 wherein said synthesized DNA molecules are shorter in length than said first DNA molecule and wherein said synthesized DNA molecules comprise a terminator nucleotide at their 5' termini; and (d) separating said synthesized DNA molecules by size so that at least a part of the nucleotide sequence of said first DNA molecule can be determined.

28. The method of claim 27, wherein said terminator nucleotide is
10 ddTTP.

29. The method of claim 27, wherein said terminator nucleotide is ddATP.

30. The method of claim 27, wherein said terminator nucleotide is ddGTP.

15 31. The method of claim 27, wherein said terminator nucleotide is ddCTP.

32. The method of claim 27, wherein said DNA polymerase is isolated from *Thermotoga neapolitana*.

20 33. The method of claim 32, wherein said DNA polymerase is isolated from *Thermotoga neapolitana* DSM 5068.

34. The method of claim 27, wherein said DNA polymerase is isolated from a recombinant host expressing a gene encoding said DNA polymerase.

PCT/US95/12358

-44-

35. The method of claim 27, wherein one or more of said deoxyribonucleoside triphosphates is detectably labeled.

36. The method of claim 35, wherein said labeled deoxyribonucleoside triphosphate is [$\alpha^{32}S$]dATP.

5 37. A method for amplifying a double stranded DNA molecule, comprising:

10 (a) providing a first and second primer, wherein said first primer is complementary to a sequence at or near the 3'-termini of the first strand of said DNA molecule and said second primer is complementary to a sequence at or near the 3'-termini of the second strand of said DNA molecule;

15 (b) hybridizing said first primer to said first strand and said second primer to said second strand in the presence of Tne DNA polymerase having a molecular weight of about 100 kilodaltons, under conditions such that a third DNA molecule complementary to said first strand and a fourth DNA molecule complementary to said second strand are synthesized;

(c) denaturing said first and third strand, and said second and fourth strands with heat; and (d) repeating steps (a) to (c) one or more times.

38. The method of claim 37, wherein said DNA polymerase is isolated from *Thermotoga neapolitana*.

20 39. The method of claim 38, wherein said DNA polymerase is isolated from *Thermotoga neapolitana* DSM 5068.

40. The method of claim 37, wherein said DNA polymerase is isolated from a recombinant host expressing a gene encoding said DNA Polymerase.

41. A kit for sequencing a DNA molecule, comprising:

WO 96/10640

PCT/US95/12358

-45-

(a) a first container means comprising a Tne DNA polymerase having a molecular weight of about 100 kilodaltons;

(b) a second container means comprising one or more dideoxynucleoside triphosphates; and

(c) a third container means comprising one or more deoxynucleoside triphosphates.

42. The kit of claim 41, wherein said DNA polymerase is isolated from *Thermotoga neapolitana*.

43. The kit of claim 42, wherein said DNA polymerase is isolated from *Thermotoga neapolitana* DSM 5068.

44. The kit of claim 41, wherein said DNA polymerase is isolated from a recombinant host expressing a gene encoding said DNA polymerase.

45. A kit for amplifying a DNA molecule, comprising:

(a) a first container means comprising a Tne DNA polymerase having a molecular weight of about 100 kilodaltons; and

(b) a second container means comprising one or more deoxynucleoside triphosphates.

46. The kit of claim 45, wherein said DNA polymerase is isolated from *Thermotoga neapolitana*.

47. The kit of claim 46, wherein said DNA polymerase is isolated from *Thermotoga neapolitana* DSM 5068.

48. The kit of claim 45, wherein said DNA polymerase is isolated from a recombinant host expressing a gene encoding said DNA polymerase.

WO 96/10640

5

49. A mutant *Thermotoga neapolitana* DNA polymerase having at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said DNA polymerase; and (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides, or fragments thereof.

10

50. The mutant *Thermotoga neapolitana* DNA polymerase as claimed in claim 49, wherein said third mutation is a Phe⁶¹-Tyr⁶⁷ substitution.

15

51. The mutant *Thermotoga neapolitana* DNA polymerase as claimed in claim 49, wherein said first mutant is a Asp¹²²-Ala¹²² substitution.

20

52. The mutant *Thermotoga neapolitana* DNA polymerase as claimed in claim 49, wherein said mutant polymerase comprises both a Phe⁶¹ - Tyr⁶⁷ substitution and a Asp¹²² - Ala¹²² substitution.

53. The mutant *Thermotoga neapolitana* DNA polymerase as claimed in claim 49, wherein said mutant polymerase is devoid of the N-terminal 5'-3' exonuclease domain.

54. The mutant *Thermotoga neapolitana* DNA polymerase as claimed in claim 53, wherein said mutant polymerase is devoid of the 219 N-terminal amino acids of *Thermotoga neapolitana* DNA polymerase.

25

55. An isolated DNA molecule comprising a DNA sequence encoding a mutant *Thermotoga neapolitana* DNA polymerase having at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said

DNA polymerase; and (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides, or fragments thereof.

5. 56. The isolated DNA molecule as claimed in claim 55, wherein said DNA molecule is selected from the group consisting of pTrcTne3S, pTrcTneFY, pTrcTne3SFY, and pITQTne53SFY.

57. The isolated DNA molecule as claimed in claim 55, wherein said DNA molecule further comprises expression control elements.

10 58. The isolated DNA molecule as claimed in claim 57, wherein said expression control elements comprise an inducible promoter selected from the group consisting of λP_L promoter, a tac promoter, a trp promoter, and a uuc promoter.

15 59. A recombinant host comprising a DNA sequence encoding a mutant *Thermotoga neapolitana* DNA polymerase having at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said DNA polymerase; and (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides, or fragments thereof.

20 60. A method of producing a Tne DNA polymerase, said method comprising:

25 (a) culturing a cellular host comprising a gene encoding a mutant *Thermotoga neapolitana* DNA polymerase having at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second

5

mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said DNA polymerase; and (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides, or fragments of said mutant *Thermotoga neapolitana* DNA polymerase;

10

(b) expressing said gene; and

(c) isolating said mutant *Thermotoga neapolitana* DNA polymerase from said host.

61. The method of producing a *Thermotoga neapolitana* DNA polymerase as claimed in claim 60, wherein said host is *E. coli*.

15

62. A method of synthesizing a double-stranded DNA molecule, comprising:

(a) hybridizing a primer to a first DNA molecule; and

(b) incubating said DNA molecule of step (a) in the presence

of one or more deoxyribonucleoside triphosphates and a mutant *Thermotoga neapolitana* DNA polymerase under conditions sufficient to synthesize a second DNA molecule complementary to all or a portion of said first DNA molecules; wherein:

20

said mutant *Thermotoga neapolitana* DNA polymerase has at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said DNA polymerase; and (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides, or fragments thereof.

25

63. The method of synthesizing a double-stranded DNA molecule as claimed in claim 62, wherein said deoxyribonucleoside triphosphates are selected from the group consisting of dATP, dCTP, dGTP, dTTP, dITP, 7-deaza-dGTP.

dUTP, ddATP, ddCTP, ddGTP, ddITP, ddTTP, [α S]dATP, [α S]dTTP, [α S]dGTP, and [α S]dCTP.

5

64. The method of synthesizing a double-stranded DNA molecule as claimed in claim 63, wherein one or more of said deoxyribonucleoside triphosphates are detectably labelled.

65. The method of synthesizing a double-stranded DNA molecule as claimed in claim 64, wherein said label is selected from the group consisting of a radioactive isotope, a fluorescent label, a chemiluminescent label, a bioluminescent label, and an enzyme label.

10

66. A method of sequencing a DNA molecule, comprising:

(a) hybridizing a primer to a first DNA molecule;

(b) contacting said DNA molecule of step (a) with deoxyribonucleoside triphosphates, a mutant *Thermotoga neapolitana* DNA polymerase, and a terminator nucleotide;

15

(c) incubating the mixture of step (b) under conditions sufficient to synthesize a random population of DNA molecules complementary to said first DNA molecule;

20

wherein said synthesized DNA molecules are shorter in length than said first DNA molecule and wherein said synthesized DNA molecules comprise a terminator nucleotide at their 5' termini; and

(d) separating said synthesized DNA molecules by size so that at least a part of the nucleotide sequence of said first DNA molecule can be determined.

25

wherein said mutant *Thermotoga neapolitana* DNA polymerase has at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said DNA polymerase; and (3) a third mutation in the O

helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides, or fragments thereof.

5 67. The method sequencing a DNA molecule as claimed in claim 66, wherein said terminator nucleotide is selected from the group consisting of ddTTP, ddATP, ddGTP, and ddCTP.

10 68. A method for amplifying a double stranded DNA molecule, comprising:

15 (a) providing a first and second primer, wherein said first primer is complementary to a sequence at or near the 3'-termini of the first strand of said DNA molecule and said second primer is complementary to a sequence at or near the 3'-termini of the second strand of said DNA molecule;

20 (b) hybridizing said first primer to said first strand and said second primer to said second strand in the presence of a *Thermotoga neapolitana* DNA polymerase, under conditions such that a third DNA molecule complementary to said first strand and a fourth DNA molecule complementary to said second strand are synthesized;

25 (c) denaturing said first and second strand, and said second and fourth strands with heat; and

(d) repeating steps (a) to (c) one or more times,

wherein:

25 said mutant *Thermotoga neapolitana* DNA polymerase has at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said DNA polymerase; and (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides.

69. A kit for sequencing a DNA molecule, comprising:

-51-

(a) a first container means comprising a mutant *Thermotoga neapolitana* DNA polymerase;

(b) a second container means comprising one or more dideoxynucleoside triphosphates; and

(c) a third container means comprising one or more deoxynucleoside triphosphates,

wherein:

said mutant *Thermotoga neapolitana* DNA polymerase has at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said DNA polymerase; and (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides.

15

70. A kit for amplifying a DNA molecule, comprising:

(a) a first container means comprising a mutant *Thermotoga neapolitana* DNA polymerase; and

(b) a second container means comprising one or more deoxynucleoside triphosphates.

20

wherein:

said mutant *Thermotoga neapolitana* DNA polymerase has at least one mutation selected from the group consisting of (1) a first mutation that substantially reduces or eliminates 3'-5' exonuclease activity of said DNA polymerase; (2) a second mutation that substantially reduces or eliminates 5'-3' exonuclease activity of said DNA polymerase; and (3) a third mutation in the O helix of said DNA polymerase resulting in said DNA polymerase becoming non-discriminating against dideoxynucleotides.
